 **VARVEL**  
KNOW-HOW TO DO IT

## L'esperienza al servizio dell'innovazione

IT

Dal 1955 il Gruppo Varvel progetta e realizza sistemi di trasmissione di potenza impiegati in numerosi settori dell'industria. "Know-how to do it": Varvel ha le competenze per soddisfare al meglio le richieste dei clienti. Grazie alla grande esperienza maturata in oltre sessant'anni, Varvel offre alla clientela un'ampia gamma di soluzioni standard e prodotti personalizzati per esigenze specifiche.

L'intera gamma di prodotti Varvel è progettata e realizzata in Italia, ma il Gruppo è presente in tutto il mondo con due filiali (una in USA e l'altra in India) e una rete globale con oltre 100 partner commerciali.

## Experience at the service of innovation

EN

The Varvel Group has been designing and producing power transmission systems for numerous areas of industry since 1955. "Know-how to do it": Varvel has the know-how needed to satisfy customers' requests in the best way possible. Thanks to over sixty years of accumulated experience, Varvel can offer customers a vast range of standard solutions and customise products for specific needs. The entire product range is designed and made in Italy and sold worldwide through two subsidiaries (in the USA and India) and a global network of over 100 commercial partners.

## Erfahrung im Dienste der Innovation

DE

Die Varvel-Gruppe entwickelt und produziert seit 1955 Kraftübertragungssysteme für viele Industriezweige. "Know-how to do it": Varvel verfügt über das Know-how, um die Anforderungen der Kunden bestmöglich zu erfüllen. Dank der in über sechzig Jahren Firmenaktivität gesammelten Erfahrung kann Varvel seinen Kunden eine breite Palette von Standardlösungen und maßgeschneiderten Produkten für alle spezifischen Anforderungen bieten. Die gesamte Varvel-Produktpalette wird in Italien entwickelt und hergestellt; darüber hinaus ist die Gruppe aber auch weltweit mit zwei Tochtergesellschaften (die eine in den USA und die andere in Indien) und einem globalen Netzwerk mit über 100 Geschäftspartnern präsent.

### **Modularity**

Since the 2000s, the VARVEL product design has focused on modularity and flexibility, allowing the sales network to assemble kit gearbox in minutes with standard equipment.

Kit mounting provides VARVEL distributors and resellers with great flexibility, allowing them to configure the required product as soon as possible.

#### Electronic catalogue

**VARsize<sup>®</sup>** selection program, available from our site [www.varvel.com](http://www.varvel.com) allows a friendly sizing of VARVEL product range.

#### 2D/3D Drawings

A guided selection lets 2D/3D models downloaded for the most popular CAD systems.

#### Guided selection

VARsize returns

- the gearboxes matching the required operation parameters (power, output torque, rpm, service factor etc.),
- a data sheet featuring performance data of the selected gearbox;
- the 2D dimensional drawings,
- the 3D model.

## Description

Integral casing, input bevel and output cylindrical gears to afford significant external loads are the features of the RO-2 Series two-stage orthogonal gearboxes .

The RO-2 Series is designed according to ISO design standards using structural analysis to verify the deformation and stress of the housing.

Operating torque and external loads do not cause the robust monolithic structure to deform, leading to positive results on the sealing surfaces.

By simply applying one of the different output flanges available, the shaft mount version can be converted to B5 flange form.

Output shafts of different sizes and types (hollow with keyway in standard version, and on request with shrink-disk clamping, throughout splined, and with one or two solid extensions) are available for a wide range of applications.

Four sizes, 17 ratios, and a torque range of 120 to 500 Nm are available for the RO-2 series.

### Thermal power

The rated power is the power that can be applied to the input of the gearbox, on continuous service, max. room temperature of 40 °C, max. altitude 1000 m, without exceeding an oil temperature of about 85 °C.

The thermal power can limit the rated power depending on the cooling system, the input speed, the ambient temperature and the service factor.

### Oil seals

- NBR - fitted on input and output shafts as standard.
- Viton - for operation with 2-pole AC, DC and servo motors, on demand.
- Silicone - for low temperature operation, on demand.

### Lubricant

Gearboxes are delivered filled with synthetic long-life oil (ISO VG 320 Grade) for temperature -15/+35 °C as standard. Oil quantities are valid for any working positions. Lubrication-for-life is factory packed.

Oil, drain or vent plugs on demand.

### Service factor

Selection data are intended for service factor SF1.0. i.e.

- 8 running hours per day,
- uniform load,
- max. 6 start/stops per hour and
- room temperature from 15 to 35 °C.

More detailed information on page 13.

### Directive ATEX

The gearboxes VARVEL-ATEX, supplied on demand, are manufactured according to the European Directive 2014/34/UE-ATEX and therefore, they are qualified for installation in potentially explosive atmospheres.

Detailed information at pages 58-59.

### Surface protection

- liquid painting: two-component epoxy paint primer and two-component polyurethane enamel finish.
- white paint RAL 9010 for food environments without direct contact with food: a primer with two-component epoxy paint and two-component acrylic finish based on hydroxylated acrylic resins and aliphatic isocyanic adduct.
- black anodising according to ISO 10681
- fluorination (Cr-free conversion)

### Dimensions

Dimensions and units of measurement are referred to metric system, or imperial where applicable

### General specifications

Range	2 gear stages 4 sizes 17 reduction ratios 500 Nm max. output torque
Sizing	according to ISO6336/DIN3990
Housing	pressure die cast aluminium, monoblock cast
Coupling	pressure die cast aluminium - steel, on demand
Toothed parts	tooth profile ground/shaved - run-in bevel gears
Bearings	ball- or roller-types , according to sizes
Oil seals	NBR - standard VI - Viton on demand SI - Silicone on demand
Lubricant	synthetic long-life oil - grade ISO VG 320
External surfaces	natural aluminium, unpainted
Protection grade	IP66 - gearbox body only IP20 - gearbox with flanges increased grades on demand
ATEX	on demand

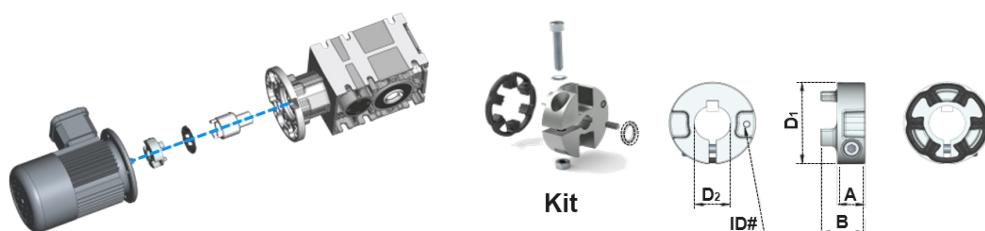

### Symbols

Fr <sub>1</sub> , Fr <sub>2</sub> , Fr	[N]	radial load (input, output, application)
Fa <sub>2</sub>	[N]	axial load (output)
SF		service factor
SF <sub>1</sub>		SF by load type
SF <sub>2</sub>		SF by starts per hour
i, i <sub>r</sub>		reduction ratio (nominal, real)
J <sub>1</sub> , J <sub>2</sub> , J <sub>m</sub>	[kgm <sup>2</sup> ]	moment of inertia of the gearbox (input, output ) and of motor
k <sub>a</sub> , k <sub>L</sub> , k <sub>T</sub> , k <sub>S3</sub>		factor (acceleration, length, type, S3 intermittence)
H, V		mounting (horizontal, vertical)
Lub	[litri]	lubricant
M <sub>2</sub> , M <sub>(app)</sub>	[Nm]	maximum output torque (gearbox, application)
η		efficiency

### Useful formulae

Input power [kW]	Output torque [Nm]	Duty factor [FU]
$P_1 = \frac{M_2 * n_2}{9550 * \eta}$	$M_2 = \frac{9550 * P_1 * \eta}{n_2}$	$FU = \frac{M_2}{M_{(app)}}$

## Coupling

### Jaw-coupling clamped on the motor shaft

- IEC, NEMA, Brushless, DC adapters and couplings to fit on already assembled gearbox
- Elimination of fretting corrosion between bore and key
- Zero backlash in gearbox/motor connection
- High torsional rigidity

									Motor frame (IEC)
									Motor power

MT = Three-phase motor  
 MM = Single-phase motor  
 MA = Brake motor

## Weights Mounting position

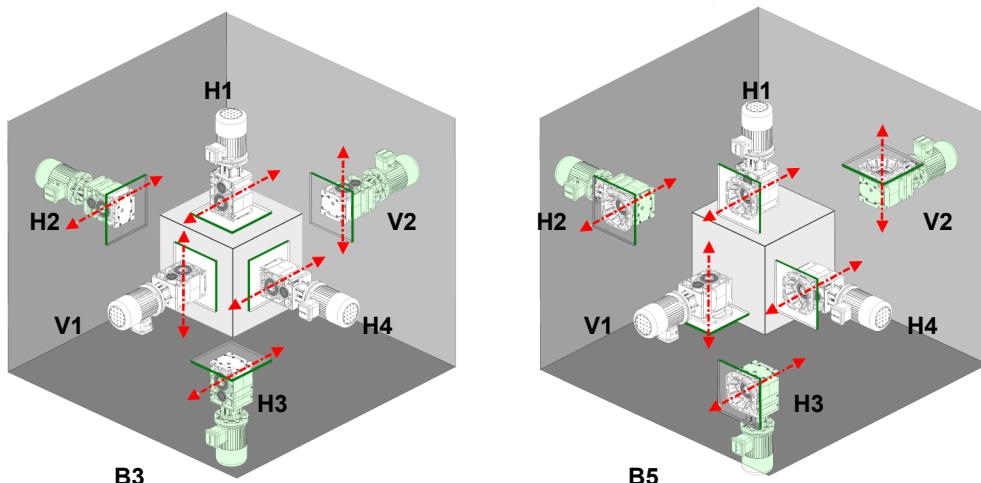

### Weights and oil quantity

FRO SRO RO	Weight kg	ISO VG320 Oil [litres]					
		H1	H2	H3	H4	V1	V2
02	4.4	0.4	0.2	0.3	0.2	0.4	0.3
12	7.0	0.7	0.4	0.6	0.4	0.7	0.5
22	11	1.0	0.7	0.9	0.7	1.1	0.8
32	15	1.5	1.0	1.3	1.0	1.5	0.9

**RO-2**

### Mounting position

#### Attention !

Mounting position (H or V) is referred to the output shaft position and not to B3-foot or B5-flange fixing position.

## Lubrication

### Lubricants

VG320	*	Degol GS 320	Enersyn SG-XP320	Alphasyn PG 320	Glycolube 320	Klübersynth GH-6-320	Glygoyle HE 320	Synlube CLP 320	Carter SY 320	Omala S4 WE 320
	**	Eural Gear 320	---	Vitalube GS 320	Gear Oil FM 320	Klübersynth UH1-6-320	Mobil DTE FM 320	---	Nevastane EP 320	---

All the units are delivered already filled with synthetic long-life oil.

ISO VG 320 grade allows correct operation in the ambient temperature range between -15 and +35 °C (+60 and +95 °F).

Lower or higher temperatures require environmental considerations to submit to Customer Service.

\* - synthetic base oil

\*\* - Food Industry Approved synthetic oil

### Apparent oil leakages

The oil seal lip is protected with a special grease to prevent the shaft rotation without any lubricant interposed at start-up and to protect oxidation of the oil seal lip track.

The oil seal lip temperature increases during operation; the grease placed outside fluidizes and its oily part can be incorrectly recognized as oil coming from inside.

This oiliness, like the lubricating film that is always present between the oil seal and the shaft, can be wrongly judged as a loss of lubricant.

### Breather plugs

The vent cap installation is recommended when the internal pressure exceeds the values of 0.25-0.3 bar to avoid possible leakage of lubricant from the oil seals.

The increase in internal pressure is caused by the variation in lubricant volume caused by the temperature increase under external conditions (inclined working position, environment greater than 35 Celsius), or internal (input speed greater than 2000 rpm, frequent starts, continuous service over 8 hours a day)..

## Service factors

### Duty factor

The ratio between the gearbox's maximum output torque  $M_2$  and the  $M_{app}$  application's torque requirement defines the Duty factor.

The ratio shall be greater than or equal to the SF or  $k_{(a)}$  factors described here.

$FU$  - duty factor

$M_2$  - max. torque of the gearbox

$M_{app}$  - torque of the application

$$FU = \frac{M_2}{M_{app}}$$

$$FU \geq SF$$

$$FU \geq k_{(a)}$$

### Service factor

The Service factor [SF1.0] is intended to be representative of an operation of 8 hours per day, with a uniform load, starts of less than 6 per hour and ambient temperature between 15 and 35 Celsius.

For other service conditions, select SF according to tables SF<sub>1</sub> and SF<sub>2</sub>.

SF	- service factor
SF <sub>1</sub>	- SF by load type
SF <sub>2</sub>	- SF by starts per hour
h	- hours
A, B, C	- type of load (uniform, variable with shocks)
n	- number

SF <sub>2</sub>	n	RS - RT	SF <sub>1</sub>
6		1.0	h
60		1.1	A    B    C
120		1.2	8    1.0    1.2    1.4

$$SF = SF_1 \times SF_2$$

SF <sub>1</sub>	h	A	B	C
8		1.0	1.2	1.4
16		1.2	1.4	1.6
24		1.4	1.6	1.8

### Acceleration factor

The Mass Acceleration factor [ $k_{(a)} \leq 0.2$ ] is used to represent an operation of 8 hours per day for Load class A.

For other working conditions, select  $k_{(a)}$  according to the charts on pages 3 and 4 of the Catalogue FS - Service factors.

$k_a$	- acceleration factor
A, B, C	- load class (uniform, moderate shocks, heavy shocks)
$J_1, J_2$	- moment of inertia of the gearbox (input, output)
$J_m$	- moment of inertia of the motor
$i_r$	- real reduction ratio

$$k_a = \frac{\frac{J_2}{i_r^2} + J_1}{J_m}$$

	$k_{(a)}$
A	$k_{(a)} \leq 0.2$
B	$0.2 < k_{(a)} \leq 3$
C	$3 < k_{(a)} \leq 10$

## Duty type

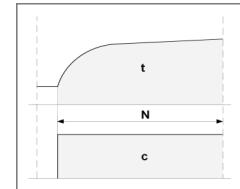

Duty types are defined by CEI EN 60034-1/ IEC34-1 Standard.

### S1 - Continuous duty

Operation

- steady load (c)
- indefinite period of time (N)
- period long enough to achieve thermal balancing (t)

On continuous duty, select the gearbox with service factor SF1.0 or higher

### S3 - Periodic intermittent duty

Operation

- steady load (c)
- according to a cycle (C)
- including a steady load time (N)
- and a rest time (R)

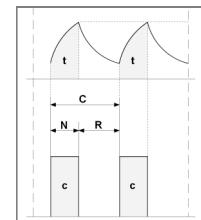

Starts/stops do not affect temperature (t).

Reference cycle (C) is 10 minutes overall.

On periodic intermittent duty, select the gearbox with the appropriate multiplier  $k_{S3}$  or higher.

Intermittence ratio is calculated according the following formula.

$$\frac{N}{(N+R)} * 100 = \begin{cases} 60\% & k_{S3} 0.9 \\ 40\% & k_{S3} 0.85 \\ 25\% & k_{S3} 0.75 \\ 15\% & k_{S3} 0.7 \end{cases}$$

c - load

C - duty cycle

N - operation time

R - rest time

t - temperature

## External loads

### Radial (overhung) load

The radial (OHL) load of the Catalogue should be checked according to

- output speed,
- mounting position,
- the transmission element fitted on the output shaft of the gearbox,
- and then rectified by the appropriate  $k_L$  and  $k_T$  rating factors.

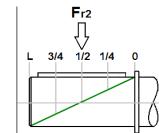

Gearbox radial load  $F_{r2}$  must be greater than or equal to application radial load  $F_r$ .

#### Application point

The radial load is considered as applied at the output shaft mid-point.

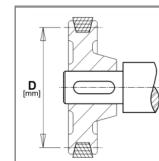

Other positions origin loads to be adjusted by the appropriate factor  $k_L$ :

$k_L$	L [mm]
1.1	1/4 * L
1.0	1/2 * L
0.9	3/4 * L
0.8	L

#### Transmission element

$k_T$	Element type
1,15	Gear tooth No. < 17
1,40 1,25 1,00	Chain sprocket tooth No. < 13 tooth No. < 20 tooth No. > 20
1,75 2,50 2,25	Pulley for V-belt flat belts toothed-belt

### Axial load

The axial load is included in the catalogue radial load as

- 20% of  $F_{r2}$  value
- and it is valid for both tensile and compressive axial stress.

Radial load	Axial load
$F_{r2} = (2000 \times M_2) : D \times k_L \times k_T$ $F_{r2} \geq F_r$	$F_{a2} = F_{r2} \times 0.2$

$F_{a2}$  - permissible axial load

$F_r$  - radial load of application

$F_{r2}$  - radial load of gearbox

D - transmission element diameter

$k_L$  - application point factor

$k_T$  - transmission element factor

$M_2$  - output torque of gearbox

## Versions

### MRO-2

Geared motors

- output hollow shaft
- two gear sets
- foot-, flange- and shaft-mounting

### FRO-2

Gearboxes with input motor flange

- hollow output shaft and input coupling
- two gear sets
- foot-, flange- and shaft-mounting

### SRO-2

Gearboxes without input motor flange

- hollow output shaft and input coupling
- two gear sets
- foot-, flange- and shaft-mounting

### RO-2

Gearboxes with input solid shaft

- hollow output shaft
- two gear sets
- foot-, flange- and shaft-mounting

The rated power is the power that can be applied to the input of the gearbox, on continuous service, max. room temperature of 40 °C, max. altitude 1000 m, without exceeding an oil temperature of about 85 °C.

The thermal power can limit the rated power depending on the cooling system, the input speed, the ambient temperature and the service factor.

$i_n$  - nominal reduction ratio  
 $i_r$  - actual reduction ratio

$P_1$  - nominal power  
 $P_{t1}$  - thermal power

The keying device is based on the wedge principle to create a mechanical coupling for interference without the need of a key. Stable shrinkage occurs due to the conversion of axial tightening of the screws into radial contact pressure between the shaft and the hub.

**Assembly**

Ensure that the contact surfaces of the shaft and hub are cleaned carefully and apply a light layer of oil. Gradually and evenly tighten the screws until the required tightness torque is reached. Avoid using oils that contain molybdenum disulfide, as it causes a significant drop in the coefficient of friction. The hub does not move axially with respect to the shaft during screw tightening.

**Disassembly**

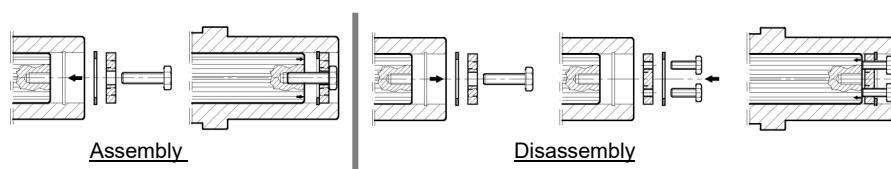

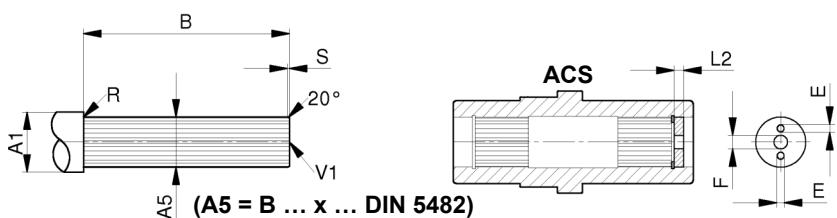

Slowly loosen the screws without removing them from the threads.

To ensure a coefficient of friction of 0.04, apply a lubricant paste to the screws and conical surfaces when reusing them.

Tightening torques, tolerances, and roughness in accordance with manufacturer's specifications.

## ACS

Splined hollow output shaft

The spined shafts have teeth that mesh with the corresponding grooves of a coupler piece and transfer the torque, while maintaining the angular correspondence between them.

The grooves can offer greater torque and a longer fatigue life as an alternative to the hollow/key connection.

**AS - ACC - F - BT - BTV - BTF**

Accessory position

The accessories in the working positions RH and LH refer to the mounting position H1 on p. 12 and are seen from the cover of the lower side of the reducer.

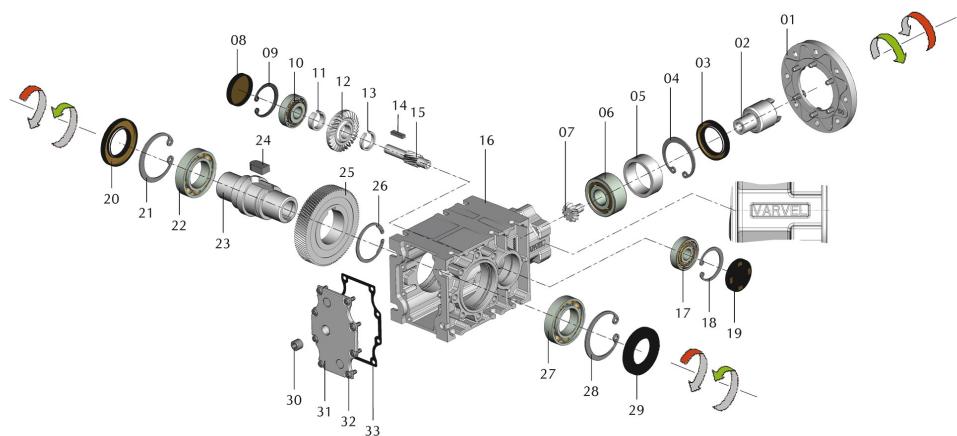

The side of the casing with the oil plug (REF.1) is the exact identification of the reference side of the cover.

The order remains pending until the RH or LH side is determined if the accessory must be factory-mounted.

For BT-BTV-BTF accessories and other mounting positions, please refer to Customer Service.

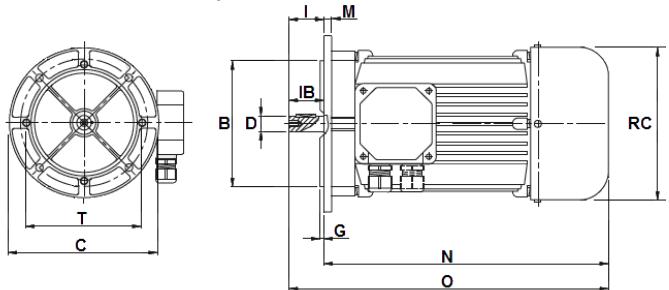

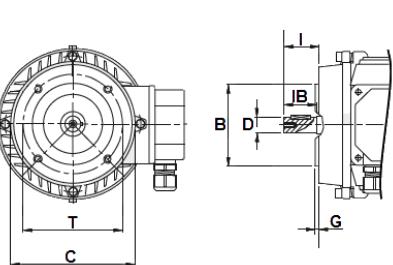

The standard accessory positions are indicated with grey highlights.

## **ATEX**

Directive 2014/34/UE  
Regulation 2016/1107/UK

The European Directive 2014/34/EC-ATEX relates not only to electric devices but to all the machines and driving units destined, alone or combined, to operate in potentially explosive environments within European Community territory.

The gearboxes are identified as «components» in the Directive and therefore, deprived of their autonomous function but essential for the operation of equipment and protective systems intended for production, transport, storage, measurement, adjustment and conversion of energy and transformation of materials that, due to their own flammability potential, are likely to trigger an explosion.

The gearboxes VARVEL-ATEX are manufactured

- with metallic housings and covers, containing the driving gears fitted on ball or roller bearings;
- FKM-Fluor-elastomer (Viton) oil seals on input and output shafts;
- the needed oil quantity to ensure the unit operation;
- sealed thread screws with sealing paste.

VARVEL RO-2 Series conforms to design directions required for

- Group II
- Category 2 and 3
  - zones 1 and 2 for operation in zones with risk of explosion in presence of gas
  - zones 21 and 22 for operation in zones with risk of explosion in presence of combustible dust

The VARVEL-ATEX products are marked for the

- key/keyway input version

   II 2 G Ex h IIC T4 Gb IP66 T<sub>amb</sub> -20 /+55°C  
II 2 D Ex h IIIC T135°C Db IP66 T<sub>amb</sub> -20 /+55°C

key to ATEX Code

II	- group II (surface industries)
2, 3	- category (2, 3)
G, D	- explosive environment (gas, dust)
Ex h	- mode of protection
IIC, IIIC	- group of explosion (gas, dust)
T4	- class of temperature (gas)
T 135°C	- max. temperature of surface (dust)
Gb, Db	- EPL - Explosion Protection Level (gas, dust)
IP66	- protection of gearbox
T <sub>amb</sub>	- ambient temperature -20 /+55°C

### **Attention !**

VARVEL-ATEX gearboxes  
are not certified for operation in **hatched areas**.

Substances	Zones	Categories	EPL	Key code
Gas, Vapours, Cloud	0	1G	Ga	0 Continuous occurrence of explosive gas
	1	2G	Gb	1 Occasional occurrence of explosive gas
	2	3G	Gc	2 Unlikely occurrence of explosive gas
Dusti	20	1D	Da	20 Continuous occurrence of explosive dust
	21	2D	Db	21 Occasional occurrence of explosive dust
	22	3D	Dc	22 Unlikely occurrence of explosive
EPL - Equipment Protection Level				1G, 1D Equipment with very high protection level
				2G, 2D Equipment with high protection level
				3G, 3D Equipment with normal protection level
				Ga, Da Very high level of protection
				Gb, Db High level of protection
				Gc, Dc Normal level of protection

Note - Gases with ignition temperature higher than or equal to Class T4=135 °C are listed on the following table.

Temperature / Group	T1 450 °C	T2 300 °C	T3 200 °C	T4 135 °C	T5 100 °C	T6 85 °C

## **INSTRUCTIONS FOR USE AND MAINTENANCE**

(complete manual on [www.varvel.com](http://www.varvel.com))

According to the Machinery Directive 2014/34/EC and its Guideline, gearboxes and speed variators are considered "separate elements of machines that do not have a specific application and are intended to be incorporated into the machine. The complete machine equipped with these components must meet the relevant essential health and safety requirements" of the Directive.

### **Installation**

Ensure that the unit to be installed has the characteristics required to perform the required function and that the mounting position is consistent with the order. These characteristics can be deduced from the identification plate on the gearbox. Verify the mounting stability so that no vibration or overload occurs during operation.

### **Operation**

The reducer can be connected by clockwise or counterclockwise rotation. Stop the gearbox immediately in the event of faulty operation or abnormal noise, remove the defect or return the unit to the factory for proper overhaul. If the defective part is not replaced, other components can also be damaged, resulting in further damage and less chance of tracing the causes.

### **Maintenance**

Although the assemblies are tested without loading before shipment, it is advisable not to use them at maximum load during the first 20-30 hours of operation so that the internal parts can adapt to each other. The gearboxes are shipped already filled with long-life synthetic oil and, if it is necessary to replace or top up the lubricant, do not mix synthetic-based oils with mineral-based oils.

### **Handling**

In the case of lifting with a hoist, use the hooking positions on the structure of the body, where they exist, holes in the feet or on the flanges, avoiding all moving parts.

### **Painting**

If the units have to be subjected to a painting process, the sealing rings, the coupling planes and the protruding shafts must be carefully protected.

### **Prolonged storage in stock**

For stays longer than three months, the application of antioxidants on external shafts and machined surfaces, and of protective grease on the lips of oil seals is considered.

### **Environmental Management of the product**

In accordance with the ISO 14001 Environmental Certification, the following indications are suggested for the disposal of our product:

- the metal components of the unit being scrapped to be delivered to authorised collection centres for metallic materials;
- the oils and lubricants collected by the unit to be disposed of and delivered to the Consortia Waste Oils;
- the packaging of the units (pallets, cardboard, paper, plastic, etc.) to be sent as far as possible to recovery/ recycling, delivering them to authorized companies for the individual waste classes.
